DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-38 and 47-59, drawn to a reduced complexity sequence estimation, classified in class 375, subclass 341.
 - II. Claims 39-46, drawn to memories for storing and transferring data, classified in class 711, subclass 100.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, group I (as the combination) as claimed does not require the particulars of the group II (as subcombination) as claimed because the invention I does not require the particulars of the subcombination as claimed for patentability. The subcombination has separate utility such as a register exchange and a trace-back architecture for storing data, with associated limitation as recited in claim 39; or a first register exchange architecture and a second register exchange architecture for storing data, with associated limitation as recited in claim 43.

2. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

3. During a telephone conversation with attorney Kevin Mason on 2/12/03 a provisional election was made with traverse to prosecute the invention of group I, claim 1-38 and 47-59. Affirmation of this election must be made by applicant in replying to this Office action. Claims 39-46 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.
4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Specification

5. The abstract of the disclosure is objected to because the abstract contains more than 150 words. Correction is required. See MPEP § 608.01(b).
6. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 112

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 2, 14 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation “an intersymbol interference estimate for a particular assignment **can be** obtained by evaluating the following equation ...” on lines 4-6. The language “can be obtained by evaluating the following equation ...” is not a definite language to indicate whether the “intersymbol interference estimate for particular assignment” is necessary to be obtained by the “equation”.

In claim 2, parameters z_n , L , f_i , $a_{\sim n-L}$, ..., $a_{\sim n-1}$ are not defined.

In claims 14 and 19, parameters $z_{n,j}$, $a_{n,j}$, L , $f_{i,j}$, $a_{\sim n,j}$, $a_{n-L,j}$, ..., $a_{n-1,j}$, $a_{\sim n-L,j}$, ..., $a_{\sim n-1,j}$ are not defined.

Allowable Subject Matter

9. Claims 1, 3-13, 15-18, 20-38 and 47-59 are allowed.

10. Claims 2, 14 and 19 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

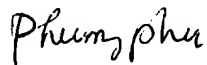

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References Cartier (5,881,106), Jekal (6,088,404) and Nagayasu (5,844,946) are cited because they are pertinent to sequence estimations utilizing branch-metric calculations.
